THE VÖLKL WAY

VÖLKL ENGINEERING

We are committed to continuous development and enhancement, merging German engineering with state-of-the-art manufacturing and meticulous craftsmanship at our Straubing production facility to create top-tier sporting goods.

DATA

To learn and progress, we don't rely solely on our experience, but also analyze data from our global ski community.

CONSUMER INSIGHTS

We focus on our consumers!

The invaluable insights into understanding their needs, preferences, and behaviors are of utmost importance for the development of our skis.

VÖLKL OBSESSION

With our unparalleled obsession for precision, attention to detail and quality enable us to improve our products constantly while shifting borders. Built to win.

BUILT TO WIN

HIGHTECH IN MATERIALS & PROCESSING

A core benefit of developing and producing in Germany is the access to the most cutting-edge materials, combined with our constant investment in high-tech processing.

ATHLETE INSIGHTS

Our athlete involvement and the invaluable insights from our fantastic team are propelling our product development to new heights.

COMMITMENT TO SUSTAINABILITY

By staying at the forefront of ski technology, we provide superior skiing performance while our commitment to sustainability preserves the natural beauty of the mountains for generations to come.

VÖLKL TESTING

We test every single ski in each specific length. Without exception. No ski goes into production without the approval of our experienced test team.

TEAM

At Vökl, we're a global team united by our love for the perfect turn on snow. Together, we harness our collective power to create the magic that happens out on the mountain.

STATUS 2025

SUSTAINABILITY FACTS

COMMITMENT TO RESPONSIBILITY

As the last major ski manufacturer in Germany, we have been working for many years to make our entire development and production process more sustainable while living up to our corporate responsibility. As part of the Elevate Outdoor Collective, we have also committed to the Science Based Targets, because as a winter sports brand we naturally see ourselves as having a special responsibility in this regard. That is why a positive CO₂ balance is of great importance to us, as is the validation of our targets through the SBTi. Wherever possible, we apply these validated insights across all four areas of our company - product, production, sales, and our brand family, which includes employees, customers, and the community.

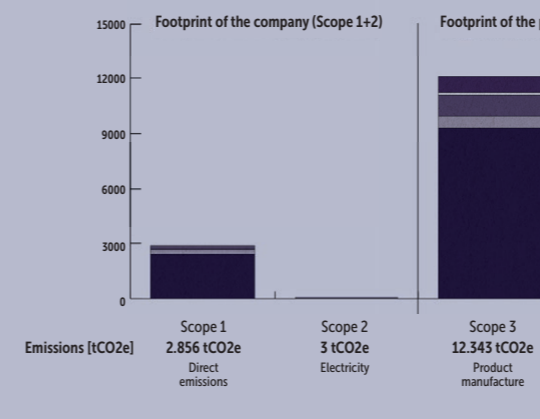

TOTAL EMISSIONS

Volkl produces the majority of its skis (81% in 2024) in Straubing, Germany. 19% are produced at the Elevate factory in Kaitai, China.

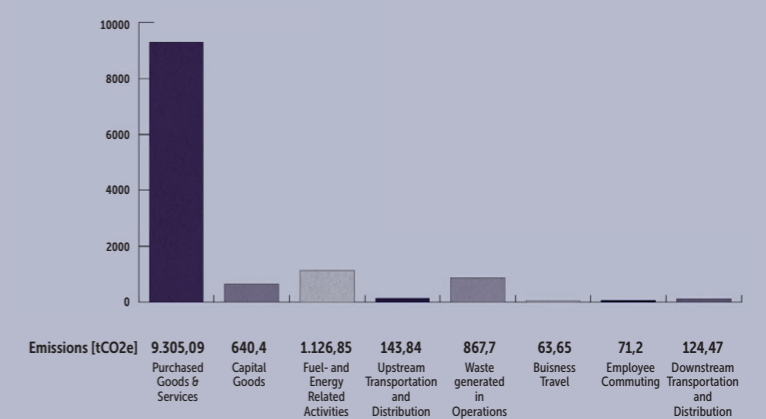

The emissions shown here refer to the Straubing factory and the distribution centers in Bogen and Parkstetten.

Emissions from the production site in China are included in the calculation of the EOC's carbon footprint and are subject to the same reduction targets.

CARBON FOOTPRINT (SCOPE 1-3)

FOOTPRINT OF PRODUCTS (SCOPE 3)

TOGETHER TO ZERO CO₂: SUSTAINABILITY GOALS OF VÖLKL & EOC

The targets cover Scope 1-3

THE 4 KEY FOCUS AREAS

OUR PATH TO GREATER RESPONSIBILITY AND SUSTAINABILITY

01

PRODUCTION

100% RENEWABLE ELECTRICITY AT THE STRAUBING SITE

The electricity we use comes entirely from 100% renewable sources. It is generated by the Danube Hydropower Plant, located 8km from our production site.

REDUCTION OF WASTE PER SKI

Currently, depending on the ski, approximately 4kg of waste is generated. Of this, 11% goes to recycling, 86% to energy recovery, and 3% is classified as hazardous waste. The goal is to reduce the total amount of waste and to shift more materials from energy recovery to materials recovery (recycling).

02

PRODUCT

PROCUREMENT OF WOOD CORES FROM CERTIFIED SUSTAINABLE FORESTRY

The wood core is the heart of our skis – it determines the ride feel, dynamics, and durability of the product. The way the wood is sourced has a direct impact on biodiversity and forest ecosystems. To avoid monocultures and ensure sustainable forestry, we rely on responsible wood procurement.

Our goal is to source 100% of the wood used for our cores from certified sustainable forestry (FSC or PEFC) by the end of 2029.

END-OF-LIFE SOLUTION FOR SKIS

Skis are made from a variety of materials that are often not efficiently recycled at the end of their lifecycle. Our goal is to develop an economically and ecologically viable solution for end-of-life skis.

03

PACKAGING & DISTRIBUTION

REDUCING PRODUCT PACKAGING

For the 26/27 season, we aim to develop a sustainable packaging solution. All paper-based packaging will consist of over 80% recycled material and be recyclable at home. Any virgin fibers will be certified as responsibly sourced by third parties by the end of 2024. Wherever it represents a more sustainable option, plastic packaging will be replaced with paper-based alternatives.

REUSABLE TRANSPORT PACKAGING

Implementation of reusable transport packaging and shipment of skis using circular packaging.

04

PEOPLE

MONITORING EMPLOYEE SATISFACTION AND SENSE OF INCLUSION

In the future, we aim to measure employee satisfaction annually using key criteria such as overall satisfaction, recognition, development opportunities, and work-life balance through surveys. Additionally, we will assess employees' sense of belonging, perception of appreciation, and whether their opinions are taken into account.

BUSINESS COOPERATION

In addition, we have been a recognized training company of the IHK Niederbayern for many years, offering a total of eight different apprenticeships in commercial and technical fields. We are an active member of the FESI Wintersport Sustainability Network and participate in the Climate Pact. Furthermore, we are part of the city of Straubing, a network aimed at promoting sustainable business practices and encouraging individual companies to take on social responsibility.

TAILORED
TECHNOLOGIES

**TAILORED
FIBER PLACEMENT**

One of our latest technologies is Tailored Fibre Placement. In this innovative manufacturing process the Tailored Carbon Tips are produced by embroidering the individual carbon fibers onto a carrier material.

This allows them to be positioned exactly along the stress lines, opening up plenty of possibilities, for performance at the front of the ski, which has a decisive influence on the handling of the ski. The stiffness, torsion and thus the skiing characteristics can be specifically adjusted via the fiber thickness and millimeter-precise alignment. In this way, the fibers guide the dynamics to the areas of the ski where they are needed. The visibly integrated Tailored Carbon Tips are light, allow an agile shovel reaction with less effort and quickly build up energy. The Tailored Carbon Tips thus reach a next level of precision, direct tip response and active skiing pleasure.

**TAILORED
TITANAL FRAME**

In this technology the width of the titanal frame is adapted exactly to each individual ski length.

This results in Tailored Titanal Frames, which are positioned above the sidewall along the tip and tail area of the ski to provide the desired damping and torsional stiffness. The size of the frames is tailored to the skier's height, skiing ability and power. This means that longer ski models have a higher titanal content for more stiffness, more direct power transmission and stronger dampening. The shorter the length, the lower the titanal content, which makes the ski more agile, so that smaller, lighter and less powerful skiers can use the full potential performance of the ski. In addition to the Tailored Titanal Frames, a second, thinner titanal layer is located in the binding area, which gives the ski the necessary strength, but also agility. The result: the Tailored Titanal Frame technology provides an incomparable combination of agility and high speed control.

Multiradius concepts for maximum versatility for various snow conditions, both on-piste and off-piste, with increased stability on hard surfaces and improved performance in soft snow.

3D RADIUS

R1

Usage of long radii at tip and tail for big turns and high speed
 // easy steering and maneuverability
 // disruption resistant at the tip
 // no radius limitation and ease of turn exit

R2

Usage of shorter radius in the center for short turns and lower speed
 // extremely easy to initiate short turns
 // strikingly agile
 // effortless and smooth in short turns

R3

Usage of long radii at tip and tail for big turns and high speed
 // easy steering and maneuverability
 // disruption resistant at the tip
 // no radius limitation and ease of turn exit

4 RADIUS DRIVE

R1

SUPPORT

For improved float in deep snow and precise initiation into the turn on groomers

R2

RESILENCE

Open radius for catch-free and variability while building up the turn

R3

FUN

Tight under-foot radius for agility in short turns

R4

POP

Open tail radius for smooth and harmonic release of the dynamics

WOODCORES

CHARACTERISTICS	MATERIAL BENEFIT	MULTILAYER WOODCORE	MULTILAYER WOODCORE LIGHT	HYBRID MULTILAYER WOODCORE	WORLD CUP ASH WOODCORE	WORLD CUP WOODCORE
	<p>MULTILAYER WOODS A combination of lighter, softer poplar wood and heavier, stronger beech wood provides a target group specific combination between light weight, strength, durability and damping: The beech typically concentrates where the most power is needed in the ski - like under the binding or alongside the edges and sidewalls.</p>	X	X	X		X
	<p>ISOCORE The addition of ISOCORE to the wood core helps to save weight and support dynamics, pop and agility.</p>			X		
	<p>SLOTTED Slots that get milled into the wood cores - with the number of slots varying according to the target group of the ski - helps to save weight and optimize the flex pattern towards a softer characterisitc.</p>		X	X		
	<p>ASH (%) Ash - the wood of the gods in ancient times - provides the best dynamic properties of any woods in skiing. At the price of heavier weight, a maximum of power transmission and dynamics can be found in skis with ash cores.</p>				100%	50%

ROCKER

Our rocker construction is directly integrated into the production cycle, so the rocker shape doesn't need to be bent afterwards, which makes the matching between the rocker and the other components much more harmonized and precise:

- // easier turn initiation
- // effective edge length extends when putting the ski onto the edge
- // additional uplift for off-piste skiing

Full Rocker
Character: The ski is bent at a constant curvature along its entire length

Tip & Tail Rocker
Character: Bends up only in the shovel and tail zones, with a camber shape in the middle

Tip Rocker
Character: Only bends upwards in the shovel area, while the middle and tail of the ski feature a camber shape

ASH WOOD CORE

The high-quality core made of solid ash, which extends over the entire length of the ski, is a technical highlight that has great impact on the skiing characteristics.

The particularly elastic hardwood has only been used in racing skis for World Cup athletes and acts as an energy accumulator: while the ski flexes when initiating the turn, the fibers stretch and absorb the tension energy. At the exit of the turn, this accumulated energy is released, giving the ski enormous dynamics. Due to the specific stretching behavior of ash, the ski also adapts optimally to the surface. This results in the greatest possible stability and reliability, which makes the ski particularly smooth.

GREEN CORE

- // All GreenCore woods are FSC certified
- // Environmentally friendly glue
- // Foam: recycled PET

RMOTION 12

Exclusive Marker Völkl toolless plate-binding system for our on-piste skis

- BENEFITS**
- // Increased strength and stiffness plus more direct power transmission and a improved feedback
 - // New absorber for improved dynamics and next level release

DEDICATED BASE STRUCTURES

POLISHED SKI BASES ENHANCE ...

- ... greatest gliding characteristics
- ... optimal base treatment options
- ... long lasting effects

DEDICATED SKI BASE STRUCTURES HAVE A STRONG EFFECT ON ...

- ... agile, precise & reliable turn initiation
- ... tighter turns with less efforts
- ... smooth drifting

After one year of intense testing we defined the following dedicated base structure for the relevant target groups / areas of use:

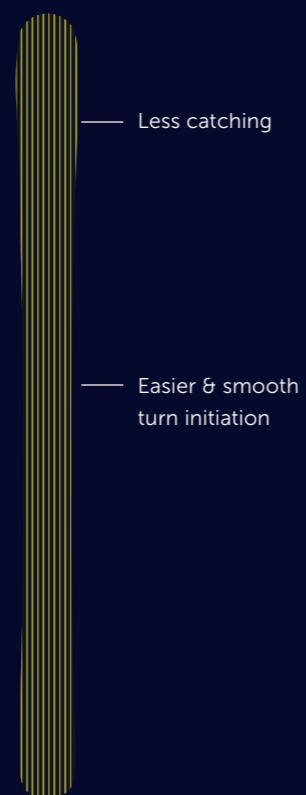

ZEBRA STRUCTURE

on system / premounted skis with narrower widths

BRUSHED STRUCTURE

on flat skis with wider widths

STRUCTURE DEPTH

superficial —●— pronounced

Very pronounced & deep structure to offer the best possible precision & steering characteristics for an on-piste ski.

superficial ●— superficial

Superficial & shallow structure matches with wide skis and their bigger bearing face > optimum agility & turning characteristics.

SMART SKIN CLIP

The innovative Smart Skinclip system allows the ski tourer to decide for themselves, depending on the situation, in which direction they should pull the skin on and off.

A standard snap hook at the tail end of the ski allows the skin to be attached and detached from behind. The skin can, however, also be pulled on and off quickly and easily from the front. This new flexibility is made possible by an elastic snap hook, which is also easy to grip with gloves. A subtle depression in the ski tip gives the hook lateral guidance and prevents it from unintentionally releasing the skin while walking.
