# INTENSITY MATTERS

Whether racing, in the backcountry or on the piste; in bright sun, in the clouds or somewhere in between, the right Clarity lens gives you ultimate trust in your vision.

## [1] UNIVERSAL

Ultimate eye comfort all day long.

## [2] INTENSE

Detail to make choices about your lines and speed.

## [3] HIGHLY INTENSE

Hyper-real view so you can read the piste at race speeds.

## [4] POCITO

Gentle on young, developing eyes.

## WHAT IS VLT

VLT stands for Visible Light Transmission, and is always given as a percentage. The higher the percentage, the more light can pass through the lens.

## LENS CATEGORIES

Lenses are categorized based on their VLT, with each category being best suited to a particular type of use.

Category 0 have little to no tint, whereas category 4, are strongly tinted and let only a very limited amount of light pass through.

In ski goggles, category 2 lenses are best suited to days with extensive cloud cover, while category 3 are better on sunnier days. The darkest category 4 lenses are designed for use on glaciers where the conditions are very bright.

LENS CATEGORY	VLT
CAT. 0	80%+
CAT. 1	43-80%
CAT. 2	18-43%
CAT. 3	8-18%
CAT. 4	3-8%

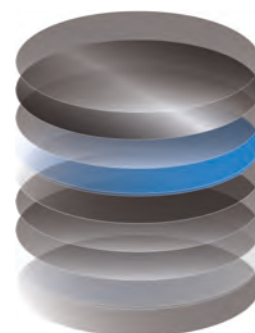

## GOGGLES LAYERS OF THE LENS

Each mirror tint serves a purpose; and it's not to grab attention. The mirror finish is carefully constructed to reflect light away from the eye and reduce glare.

Beneath the mirror lie layers of extra protection. Hydrophobic and oleophobic coatings, including Ri-Pel™, help keep the surface of the lens as clean and free of blemishes as possible. Lens surfaces may also be treated with anti-scratch and

anti-reflection coatings to keep the lens pristine. POC goggles feature a double-layer lens to help minimize fogging and provide extra eye protection. A thicker, 1.8mm outer lens enhances penetration protection.

The Clarity Night Vision lens has extra layers of anti-reflective coating to reduce glare from floodlights to give ultimate focus while racing at night.
