MISSION STATEMENT

BERN CONTINUES TO BE ON A MISSION TO INVENT AND HOOK UP ENTHUSIASTS WITH THE ULTIMATE VALUE IN COMFORT, STYLE AND PROTECTION SO RIDERS CAN BE MORE FOCUSED AND CONFIDENT OUT THERE.
DENNIS LEEDOM
CEO & FOUNDER

D.L.

CARBON ULTRALIGHT SERIES

Bern partnered with a premium carbon supplier with over 30 years of experience in carbon fiber head protection to develop the new Carbon Ultra Lite helmet platform. Built with an original carbon weave, the design delivers an exceptional strength-to-weight balance while preserving the quality and durability of a handcrafted shell. The Carbon Ultra Lite Macon 2.0 and Hendrix represent the lightest, lowest-profile hard shell helmets Bern has ever produced, pairing seamlessly with RibTech and DVRT technology as the pinnacle of Bern innovation.

DVRT STEALTH SLIDER (開閉式ベンチレーション)

The patented Stealth Slider Top Pad is a discreet internal airflow control system that lets riders fine-tune ventilation from inside the helmet without disrupting its clean exterior. The adjustable top pad blocks or opens airflow at the crown and stays securely in place once set, delivering consistent comfort across changing conditions. Now standard for the first time in the Hendrix and Macon 2.0 winter helmets, the Stealth Slider balances warmth and breathability with a true set-and-forget design.

BAKER 2.0

The Baker 2.0 evolves Bern's original low-profile design, the same iconic silhouette that gained global recognition when Seth Wescott won gold in snowboard cross at the 2006 Torino Olympics. Updated shaping, discreet venting above the lip, and DVRT padding for advanced rotational impact management bring the design into the modern era. Built without direct vents to the head, it delivers a more insulated ride while regulating temperature through internal airflow channels in the ribbed foam, resulting in a refined balance of warmth, comfort, and protection rooted in more than two decades of Bern innovation.

HARDSHELL INVENTION

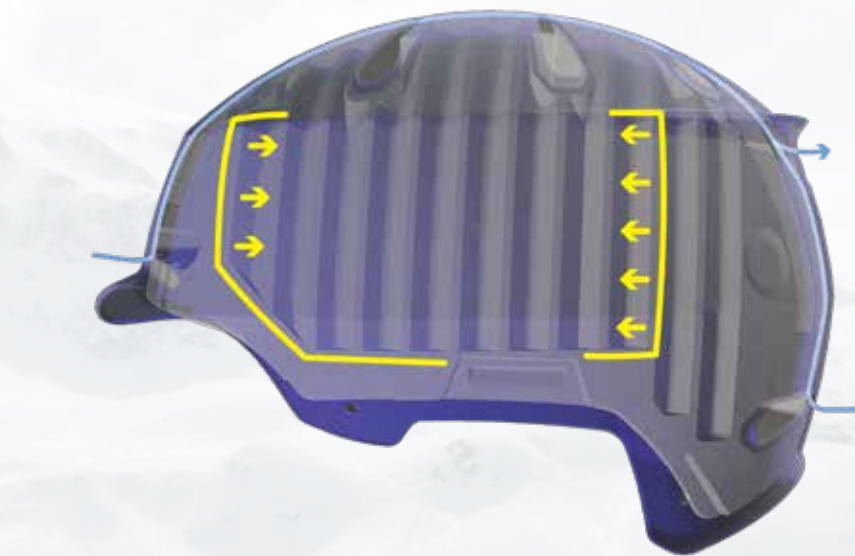

AIRFLOW

RibTech uses a ribbed EPS foam design to create internal air channels that move air from the front vents up through the helmet and out the rear exhaust ports, while also directing airflow downward toward the goggle area to help reduce fogging. This circulation helps regulate temperature without harsh, direct airflow to the head.

CRUSH ZONES

This structure also acts as a series of built-in crumple zones, allowing the foam to compress more progressively during impact. By using less material and strategically shaping the EPS ribs, we've reduced weight while improving energy absorption and impact management in low and high impacts.

RIBTECH™

LIGHTWEIGHT

RibTech's ribbed EPS construction reduces overall material without sacrificing performance, resulting in a lighter helmet that feels more balanced and less fatiguing during long days on the mountain. Despite the weight savings, the design maintains the structural integrity required to meet multiple safety standards, delivering certified protection across both bike and snow disciplines with a refined, lightweight feel and low profile.

NATURE KNOWS BEST.

DVRT(ディバート)は、特許を取得したスライドする5層の膜が全方向に回転し、衝撃を吸収する機構です。キツツキが木をつつく際に、衝撃から脳を保護する仕組みをヒントに開発されました。DVRTは、この機構を持たないヘルメットと比較して、ダメージを最大45%軽減することができます。

BAKER 2.0

EPS ORIGINAL FIT (アジャスター付)

¥24,200 (22,000+TAX)

The Baker 2.0 builds on the legacy of the original Baker, the helmet that helped disrupt the snow industry when it launched with a brimmed, no-vent design and gained global recognition after Seth Wescott's gold-medal run at the 2006 Torino Olympics. For the 26/27 season, the Baker 2.0 delivers a refined evolution of that iconic silhouette, pairing modern engineering and updated features with the warmth, simplicity, and low-profile fit that made the original a standout. Rooted in over 20 years of Bern's focus on head protection, the Baker 2.0 honors its heritage while offering a fresh expression of comfort, protection, and style for today's riders.

*Includes 2 lenses

Complies with personal eyewear standard EN174:2001

About Zeiss Sonar Lenses:

This exclusive color technology patented by ZEISS has been designed to increase contrast and make it easier to identify unevenness and obstacles in the snow. This allows the skier to react to danger more quickly and safely without impairing their performance, even on foggy and snowy days.

Carl Zeiss Vision lenses were developed to have one of the strongest hard-coating resins on the market that protects the lens from scratches and abrasions.

The sunlight is significantly more intense in the mountains – and reflections, such as those caused by snow or icy surfaces, drastically increase this effect. The result: your eyes are exposed to significantly more solar UV-A and UV-B radiation than usual.

ZEISS snow goggles filter 100% of this radiation up to a wavelength of 400 nanometres, providing reliable protection for your eyes against the dangers and possible damage caused by sunlight. They also ensure ideal vision in all weather, especially when visibility is compromised. This provides added safety, even at high speeds or in unfamiliar terrain.

1 PREMIUM ZEISS MAGNETIC LENSES

Interchangeable lens system for quickly dialing in to any lighting conditions to improve contour/visibility on cloudy or sunny days.

2 QUICK-CHANGE MAG STRIP

Swap out lens easily with the secure system that lets you adapt to changing conditions.

3 BOMB-PROOF LENS COATING

Know they'll last because of their premium eggshell and super-silver mirror coating.

4 CUSTOM SILICON RAIL STRAP

Avoid constant adjustments with the system that delivers a secure and customized fit..

5 CYLINDRICAL POLARIZED SHAPING

Eliminate distorted vision with the lens tech that is always clear and crisp.

STANDARDS

EN 174:2001, UV400

Scratch-resistant and anti-fog lenses deliver lasting clarity, resisting everyday wear while staying clear and fog-free in changing conditions.

Quick-Change Mag Strips make lens changes fast, intuitive, and ready for changing conditions.

B-1 CHROMIC (調光)

¥28,600 (26,000+TAX)

Dynamic visibility and next level style, the B-1 Chromic Goggle was designed to work in unison with your low profile Bern lid. The tint color of the photochromic lens will adjust to dark or light conditions. When the UV exposure is strong, the lenses darken gradually. Conversely, when it is weak, the lenses gradually regain their clear state. Photochromic technology provides increased visual comfort with light spectrum filtration indices ranging from 1 to 3 suitable for sunny and cloudy days.
